Лабораторная работа №2
по дисциплине
«Методы машинного обучения»
на тему
# «Изучение библиотек обработки данных»

Выполнил:
студент группы ИУ5-24М
Лещев А. О.

Москва — 2019 г.

# 1. Цель лабораторной работы

Изучить библиотеки обработки данных Pandas и PandaSQL [1].

# 2. Задание

Задание состоит из двух частей [1].

## 2.1. Часть 1

Требуется выполнить первое демонстрационное задание под названием «Exploratory data analysis with Pandas» со страницы курса mlcourse.ai.

## 2.2. Часть 2

Требуется выполнить следующие запросы с использованием двух различных библиотек — Pandas и PandaSQL:

- один произвольный запрос на соединение двух наборов данных,
- один произвольный запрос на группировку набора данных с использованием функций агрегирования.

Также требуется сравнить время выполнения каждого запроса в Pandas и PandaSQL.

# 3. Ход выполнения работы

## 3.1. Часть 1

Ниже приведён демонстрационный Jupyter-ноутбук «Exploratory data analysis with Pandas» курса mlcourse.ai (файл `assignment01_pandas_uci_adult.ipynb`). Все пояснения приведены на исходном языке ноутбука — на английском.

# Assignment #1 (demo)

## Exploratory data analysis with Pandas

**In this task you should use Pandas to answer a few questions about the Adult dataset.**

Unique values of all features (for more information, please see the links above):

- `age`: continuous.
- `workclass`: `Private`, `Self-emp-not-inc`, `Self-emp-inc`, `Federal-gov`, `Local-gov`, `State-gov`, `Without-pay`, `Never-worked`.
- `fnlwgt`: continuous.
- `education`: `Bachelors`, `Some-college`, `11th`, `HS-grad`, `Prof-school`, `Assoc-acdm`, `Assoc-voc`, `9th`, `7th-8th`, `12th`, `Masters`, `1st-4th`, `10th`, `Doctorate`, `5th-6th`, `Preschool`.
- `education-num`: continuous.
- `marital-status`: `Married-civ-spouse`, `Divorced`, `Never-married`, `Separated`, `Widowed`, `Married-spouse-absent`, `Married-AF-spouse`.
- `occupation`: `Tech-support`, `Craft-repair`, `Other-service`, `Sales`, `Exec-managerial`, `Prof-specialty`, `Handlers-cleaners`, `Machine-op-inspct`, `Adm-clerical`, `Farming-fishing`, `Transport-moving`, `Priv-house-serv`, `Protective-serv`, `Armed-Forces`.
- `relationship`: `Wife`, `Own-child`, `Husband`, `Not-in-family`, `Other-relative`, `Unmarried`.
- `race`: `White`, `Asian-Pac-Islander`, `Amer-Indian-Eskimo`, `Other`, `Black`.
- `sex`: `Female`, `Male`.
- `capital-gain`: continuous.
- `capital-loss`: continuous.
- `hours-per-week`: continuous.
- `native-country`: `United-States`, `Cambodia`, `England`, `Puerto-Rico`, `Canada`, `Germany`, `Outlying-US(Guam-USVI-etc)`, `India`, `Japan`, `Greece`, `South`, `China`, `Cuba`, `Iran`, `Honduras`, `Philippines`, `Italy`, `Poland`, `Jamaica`, `Vietnam`, `Mexico`, `Portugal`, `Ireland`, `France`, `Dominican-Republic`, `Laos`, `Ecuador`, `Taiwan`, `Haiti`, `Columbia`, `Hungary`, `Guatemala`, `Nicaragua`, `Scotland`, `Thailand`, `Yugoslavia`, `El-Salvador`, `Trinadad&Tobago`, `Peru`, `Hong`, `Holand-Netherlands`.

- `salary`: `>50K`, `<=50K`.

Importing all required packages:

```
In [1]: import pandas as pd
```

Setting maximum display width for text report [2]:

```
In [2]: pd.set_option("display.width", 70)
```

Loading data:

```
In [3]: data = pd.read_csv('adult.data.csv')
        data.head()
```

```
Out[3]:    age         workclass  fnlwgt  education  education-num  \
        0   39         State-gov   77516  Bachelors             13
        1   50  Self-emp-not-inc   83311  Bachelors             13
        2   38           Private  215646    HS-grad              9

        3  United-States  <=50K
        4           Cuba  <=50K
```

**1. How many men and women (sex feature) are represented in this dataset?**

```
In [4]: data["sex"].value_counts()
```

```
Out[4]: Male      21790
        Female    10771
        Name: sex, dtype: int64
```

**2. What is the average age (age feature) of women?**

```
In [5]: data[data["sex"] == "Female"]["age"].mean()
```

```
Out[5]: 36.85823043357163
```

**3. What is the percentage of German citizens (native-country feature)?**

```
In [6]: print("{0:%}".format(data[data["native-country"] == "Germany"]
                             .shape[0] / data.shape[0]))
```

```
0.420749%
```

**4-5. What are the mean and standard deviation of age for those who earn more than 50K per year (salary feature) and those who earn less than 50K per year?**

```
In [7]: ages1 = data[data["salary"] == "<=50K"]["age"]
        ages2 = data[data["salary"] ==  ">50K"]["age"]
        print("<=50K: = {0} ± {1} years".format(ages1.mean(), ages1.std()))
        print(" >50K: = {0} ± {1} years".format(ages2.mean(), ages2.std()))
```

```
<=50K: = 36.78373786407767 ± 14.02008849082488 years
 >50K: = 44.24984058155847 ± 10.519027719851826 years
```

**6. Is it true that people who earn more than 50K have at least high school education? (education – Bachelors, Prof-school, Assoc-acdm, Assoc-voc, Masters or Doctorate feature)**

```
In [8]: high_educations = set(["Bachelors", "Prof-school", "Assoc-acdm",
                               "Assoc-voc", "Masters", "Doctorate"])
        def high_educated(e):
            return e in high_educations

        data[data["salary"] == ">50K"]["education"].map(high_educated).all()
```

```
Out[8]: False
```

**7. Display age statistics for each race (race feature) and each gender (sex feature). Use groupby() and describe(). Find the maximum age of men of Amer-Indian-Eskimo race.**

```
In [9]: data.groupby(["race", "sex"])["age"].describe()
```

```
Out[9]:                              count       mean        std   min  \

## 3.2. Часть 2

Импортируем pandasql:

```
In [15]: from pandasql import sqldf
         pysqldf = lambda q: sqldf(q, globals())
```

Для выполнения данного задания возьмём два набора данных из исходных данных, представленных NASA для своего хакатона по предсказанию мощности солнечного излучения [3]:

```
In [16]: wind = (pd.read_csv('wind speed.csv', header=None,
                             names=["row", "UNIX", "date",
                                    "time", "speed", "text"])
                             .drop("text", axis=1))
         temp = (pd.read_csv('temperature.csv', header=None,
                             names=["row", "UNIX", "date",
                                    "time", "temperature", "text"])
                             .drop("text", axis=1))
```

Посмотрим на эти наборы данных:

```
In [17]: wind.head()
```

Out[17]:

| | row | UNIX | date | time | speed |
|---|---|---|---|---|---|
| 0 | 1 | 1475315718 | 2016-09-30 | 23:55:18 | 7.87 |
| 1 | 2 | 1475315423 | 2016-09-30 | 23:50:23 | 7.87 |
| 2 | 3 | 1475315124 | 2016-09-30 | 23:45:24 | 9.00 |
| 3 | 4 | 1475314821 | 2016-09-30 | 23:40:21 | 13.50 |
| 4 | 5 | 1475314522 | 2016-09-30 | 23:35:22 | 15.75 |

```
In [18]: wind.dtypes
```

```
Out[18]: row          int64
         UNIX         int64
         date        object
         time        object
         speed      float64
         dtype: object
```

```
In [19]: temp.head()
```

Out[19]:

| | row | UNIX | date | time | temperature |
|---|---|---|---|---|---|

```
In [20]: temp.dtypes
```

```
Out[20]: row                int64
         UNIX               int64
         date              object
         time              object
         temperature        int64
         dtype: object
```

Объединим эти наборы данных различными способами, проверяя время их выполнения [2, 4, 5]:

```
In [21]: wind.merge(temp[["UNIX", "temperature"]], on="UNIX").head()
```

```
Out[21]:    row        UNIX        date      time  speed  temperature
         0    1  1475315718  2016-09-30  23:55:18   7.87           48
         1    2  1475315423  2016-09-30  23:50:23   7.87           48
         2    3  1475315124  2016-09-30  23:45:24   9.00           48
         3    4  1475314821  2016-09-30  23:40:21  13.50           48
         4    5  1475314522  2016-09-30  23:35:22  15.75           48
```

```
In [22]: %%timeit
         wind.merge(temp[["UNIX", "temperature"]], on="UNIX")
```

```
37.8 ms ± 3.83 ms per loop (mean ± std. dev. of 7 runs, 10 loops each)
```

```
In [23]: pysqldf("""SELECT w.row, w.UNIX, w.date, w.time,
                          w.speed, t.temperature
                   FROM wind AS w JOIN temp AS t
                   ON w.UNIX = t.UNIX
                """).head()
```

```
Out[23]:    row        UNIX        date      time  speed  temperature
         0    1  1475315718  2016-09-30  23:55:18   7.87           48
         1    2  1475315423  2016-09-30  23:50:23   7.87           48
         2    3  1475315124  2016-09-30  23:45:24   9.00           48
         3    4  1475314821  2016-09-30  23:40:21  13.50           48
         4    5  1475314522  2016-09-30  23:35:22  15.75           48
```

```
In [24]: %%timeit
         pysqldf("""SELECT w.row, w.UNIX, w.date, w.time,
                          w.speed, t.temperature
                   FROM wind AS w JOIN temp AS t
                   ON w.UNIX = t.UNIX
                """)
```

```
1.31 s ± 132 ms per loop (mean ± std. dev. of 7 runs, 1 loop each)
```

Видно, что `pandasql` в 50 раз медленнее, чем `pandas`.

Сгруппируем набор данных с использованием функций агрегирования различными способами:

```
In [25]: wind.groupby("date")["speed"].mean().head()
```

```
Out[25]: date
         2016-09-01    6.396560
         2016-09-02    5.804086
         2016-09-03    4.960248
         2016-09-04    5.184571
         2016-09-05    5.830676
         Name: speed, dtype: float64
```

```
In [26]: %%timeit
         wind.groupby("date")["speed"].mean()
```

```
5.16 ms ± 111 µs per loop (mean ± std. dev. of 7 runs, 100 loops each)
```

```
In [27]: pysqldf("""SELECT date, AVG(speed)
                    FROM wind
                    GROUP BY date
                 """).head()
```

```
Out[27]:          date  AVG(speed)
         0  2016-09-01    6.396560
         1  2016-09-02    5.804086
         2  2016-09-03    4.960248
         3  2016-09-04    5.184571
         4  2016-09-05    5.830676
```

```
In [28]: %%timeit
         pysqldf("""SELECT date, AVG(speed)
                    FROM wind
                    GROUP BY date
                 """)
```

```
597 ms ± 58 ms per loop (mean ± std. dev. of 7 runs, 1 loop each)
```

Здесь разница уже более чем в 100 раз. Таким образом для таких простых запросов проще использовать Pandas.
